ELECTION OF INVENTIONS

Applicants confirm their previous election, without traverse, of claims 1-9 and 17-19 for examination on the merits.

Election of Distinct Species for Purpose of Examination

In accordance with the general outline of species within broader groups identified by the Examiner, Applicants confirm their election, solely for the purpose of examination and not with any acknowledgment of separate or distinct species, the following subgroups within the claims of Group I. The claims directed to these subspecies and a single claim embodying these narrowed subspecies is also provided.

Applicants, in accordance with the above limitations identify the following subspecies for examination:

1. Subspecies 1, Species of Host Cell: *Streptomyces lividans*
2. Subspecies 2, Species of biotransformation Gene: PikC
3. Subspecies 3, Species of Number of Biotransformation Genes Into the Host Cell: Applicants identify and elect the substitution of three genes, with gene 1 replaced with desVII, gene 2 replaced with pikC, and gene 3 replaced with desR.
4. Subspecies 4, Species of Chemical Substrate: Applicants select narbomycin structure, the glycosylated macrolide represented by the following formula:

5. Subspecies 5, Species of Biocatalyst: Applicants identify monooxygenase (the pikC enzyme) as this subspecies.
6. Subspecies 6, Number of Catalysts: As indicated in 3 (above), Applicants identify the following specific series of biocatalysts for examination on the merits:
 - Glycosyltransferase (desVII enzyme);
 - Monooxygenase (PikC enzyme); and
 - Glycosidase (desR enzyme)
7. Subspecies 7, Species of Chemical Functional Groups: The pikromycin structure shown below, the hydroxylated narbomycin structure, is elected for purposes of examination:

8. Subspecies 8, Species of Reactions: hydroxylation is the species of reaction chosen.
9. Subspecies 9, Species of Functional Group Added: The functional group added will be selected as a hydroxyl group (indicated by above arrow).
10. Subspecies 10, Species of Method Steps: The single species of method steps selected is the transformation of Streptomyces protoplasts.
